

# ALL ABOUT DENTAL IMPLANTS

## WHY YOU MIGHT NEED A DENTAL IMPLANT

With an implant, you can get natural looking teeth that perform like natural teeth and most of all you get your full smile and your confidence back. Implants help with the preservation of facial structure and prevent bone deterioration which occurs when teeth are missing.

## 11 AMAZING BENEFITS OF DENTAL IMPLANTS

### A Whiter and Brighter Smile

With dental implants, you'll be able to achieve that beautiful white smile you've been dreaming of.

### Improved Physical Appearance

Dental implants can even change the way your overall face looks. Simply put, improving your facial structure with dental implants can give you a much more natural-looking jawline.

### The Ability to Eat Certain Foods Again

Should you decide to get dental implants and once the healing process is complete, all of the food that you currently avoid due to your teeth can once again return to your life.

### Improved Clarity of Speech

Dental implants are a lot like real teeth. This means that they won't shift in your mouth while you eat or talk. You can speak once again with confidence and clarity.

### The Overall Durability of Implants

Dental implants can last a long time without needing to be replaced. In fact, it's quite normal for dental implants to last you the rest of your lifetime, which is as permanent solution, as there is!

### Improved Dental Comfort

If you currently have dentures or have had them in the past, you know just how uncomfortable they can be to wear. And if you have damaged teeth or exposed nerves, the pain that you deal with on a daily basis can be life-altering, to say the least. Once you have your dental implants, you'll be amazed at how much better you feel as a result.

### Bone Loss Prevention

A dental implant replaces both your root and your tooth. This means your ability to chew food is restored to normal, and thus, your bone is stimulated. This stimulation allows for it to not only not wear away, but to grow naturally, which is what you want.

### Improved Self-Esteem

Dental implants give you the boost in confidence that you deserve. That way you tackle all of life's obstacles head-on, and even go after a few things that you were too afraid of before.

### Aging Prevention

While you can't combat the aging process, you can at least slow it down, or make it less noticeable, with dental implants. So if you're missing teeth, and have already noticed your face starting to sink, consider getting implants today.

### Improved Oral Health

The biggest benefit, above all other benefits, to dental implants is improved oral health. Because of the fact that dental implants replace teeth and their roots completely.

### Cost-Effectiveness

Perhaps the main reason why someone wouldn't seriously consider dental implants is the cost of the procedure. But if you're currently paying for other dental procedures routinely, like bridging and root canals, or have dentures, implants can actually be more cost-effective in the long run.
